INDUSTRIAL WIRELESS BRIDGE FOR BUS TRANSFER

INDUSTRIAL WIRELESS BRIDGE FOR BUS TRANSFER

The **Industrial Wireless Bridge** is a fully functional, extremely economical, Industrial bridge, capable of taking your parameters and factory data wirelessly to desired equipment / PLC. It accepts a variety of input physical media like RS485, Ethernet, Lorawan @868Mhz and carries the same to required industrial device like SCADA, HMI, PLC with WiFi@2.4GHz and 4G CAT M1 Modem.

The Wireless Bridge can be used for

- ◆ Data transfer with LORA up to 40 KM
- ◆ Bus Transfer from one device to another device.
- ◆ MODBUS RTU and TCP/IP, Client and Server.
- ◆ Bus transfer up to 40 Km with LORA
- ◆ Bus transfer unlimited distance with 4G Modem
- ◆ High speed data transfer with 2,4Ghz

The main feature of our bridge are

1. Main Processor.

- ◆ Dual-core 32-bit microprocessor.
- ◆ 4MB Flash, 520 KB SRAM.
- ◆ Speed - 80 to 240 MHz.

2. Communication Physical Layer

- ◆ WiFi 802.11b/g/n 20 dBm WPA/WPA2/WPA2 and WPS
- ◆ Bluetooth V4.2 BR/EDR and Bluetooth LE specification (optional)
- ◆ Modbus TCP/IP, RTU for additional data.
- ◆ Lora Device and Stack for communication up to 30 Km.
- ◆ 3G/4G Modem (Optional).
- ◆ Ethernet 100Mbps.(Optional)

3. Data Security

- ◆ Certificate based authentication
- ◆ 256 bit Private and Public Key
- ◆ All keys are encrypted and stored in the device.

4. Approvals and Certifications

- ◆ RF certification: FCC/CE-RED/SRRC
- ◆ Bluetooth: BQB
- ◆ Complete Gateway - FCC/CE

5. Service offered

- ◆ Supply of Gateway equipment
- ◆ Configuration of the Wireless data transfer.
- ◆ Design of SCADA and HMI

Supporting Communication Protocols

256-bit Encryption
